PROFESSIONAL SUMMARY

Product Owner with 7+ years in technology, specializing in B2B sales-force-automation and commercial-management platforms. Skilled at turning ambiguous business demands into clear, well-prioritized backlogs and user stories, and at driving fast, data-driven decisions with cross-functional, remote-first teams. A background in system implementation and multi-ERP integrations built strong fluency in tracing data flows across systems (Oracle, SQL Server, PostgreSQL), REST APIs, and AWS cloud — writing requirements that hold up against imperfect upstream data. Currently applying this engineering rigor to AI Product Management, building custom Python frameworks for LLM evaluation (Evals) and prompt engineering. Advanced English (TOEFL ITP C1); comfortable operating asynchronously across time zones and balancing multiple concurrent initiatives under tight timelines.

CORE COMPETENCIES

Product Ownership & Backlog Management • Product Discovery & Roadmap Strategy • AI Product Management & LLM Evaluation (Evals) • Prompt Engineering • Data-Driven Prioritization & Scope Triage • User Stories & Acceptance Criteria • Cross-Functional Stakeholder Management • SQL & Data Analysis • ERP & REST API Integrations • Agile (Scrum & Kanban) • Comfort with Ambiguity & Async Execution

PROFESSIONAL EXPERIENCE

Product Owner — Landix Sistemas *Apr 2025 – Present*

- Own and prioritize the backlog and roadmap for B2B sales-force-automation and commercial-management products used across multiple industry segments, balancing delivery speed with data-driven prioritization.
- Lead Product Discovery and translate ambiguous business and ERP integration demands into clear user stories with well-defined acceptance criteria, partnering directly with engineering to keep initiatives moving under tight timelines.
- Define roadmap priorities and triage scope changes, weighing technical constraints and API/data dependencies against business goals and user needs.
- Provide technical-functional support to the development team throughout execution, unblocking issues in real time, and monitor product metrics and continuous feedback loops to inform backlog prioritization.

Tools & Tech: *Jira, Bitrix, Trello, Scrum, Kanban, Figma, REST APIs, ERP Integrations, SQL, AWS, Git, Prompt Engineering*

Implementation Analyst II — Landix Sistemas *Dec 2021 – Mar 2025*

- Led end-to-end implementation of sales-automation systems integrated with multiple ERPs, mapping how business and transactional data flows between source systems and the platform.
- Queried, manipulated, and validated data across Oracle, SQL Server, and PostgreSQL to support go-lives and troubleshoot data-quality issues stemming from imperfect upstream sources.
- Contributed to modernizing platform architecture by migrating a sales-automation platform from on-premise infrastructure to AWS cloud.
- Configured and abstracted complex business rules to fit each client's operational context, delivering smooth, sustainable implementations across all regions of Brazil.

Tools & Tech: *SQL (Oracle, SQL Server, PostgreSQL), Python, AWS, ERP Integrations, Scrum, Kanban*

Customer Service Analyst — Landix Sistemas *Feb 2020 – Nov 2021*

- Resolved complex incidents across multiple sales-force-automation solutions by analyzing underlying business rules and querying SQL Server, Oracle, and SQLite databases to identify root cause and drive process improvements.
- Ran functional and regression tests on Windows and Android applications to safeguard product quality and usability across platforms.

Implementation Analyst — Landix Sistemas *Feb 2019 – Jan 2020*

- Implemented sales-force-automation systems, configuring business rules, treating data across multiple relational databases, and supporting enterprise clients throughout onboarding and go-live.

Intern — Support, Implementation & QA — Landix Sistemas *Apr 2018 – Jan 2019*

TECHNICAL PRODUCT PROJECTS & APPLIED AI

LLM Comparison & Evaluation Benchmark (Creator) — github.com/caiocezarq/llm-comparison-benchmark *Python • AI Evals*

- Built a reproducible Python evaluation framework comparing proprietary LLMs (Google Gemini) against open-weight models (LLaMA 3, Qwen 3, GPT-OSS via Groq) to guide data-driven model selection and cost/latency/quality trade-offs in AI product decisions.
- Automated evaluation pipelines combining lexical/semantic metrics (BLEU, ROUGE, BERTScore), reasoning benchmarks (MMLU, HellaSwag), min-max normalized rankings, and EvidentlyAI consistency/drift reports.

EDUCATION, CERTIFICATIONS & LANGUAGES

B.Sc. in Computer Engineering — Universidade Federal de Uberlândia (UFU) *Degree Conferral: 2026*

Academic Leadership: Director of Assets, Electrical & Computer Engineering Student Council (FEELT-UFU) | **Capstone Project:** Comparative LLM Evaluation Framework

Certifications (Credly Verified): AI for Product Management — Pendo (2026) • Scrum Foundation Professional Certification (SFPC™) — Certiprof (2024)

Languages: Portuguese: Native | English: Advanced — TOEFL ITP C1 (Async & Cross-Time-Zone Fluency) | Spanish: Basic
